

Postscript settings for Freehand MX (PC)

PRINT Ensure that you have a postscript printer such as FILE set up.

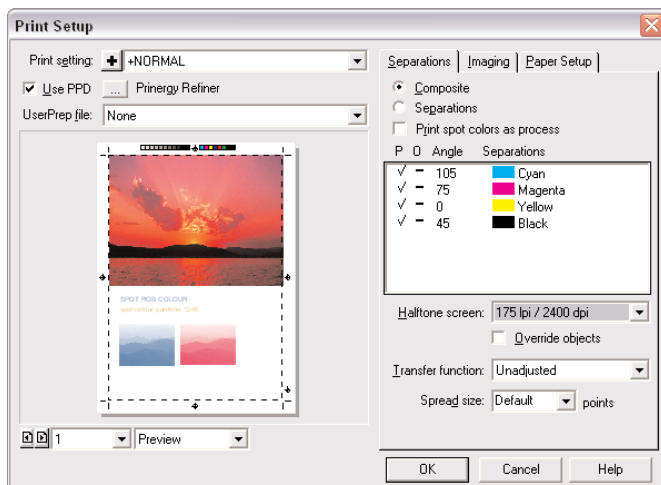

Choose a generic PPD, either Prinergy Refiner or Acrobat Distiller are good PPDs.

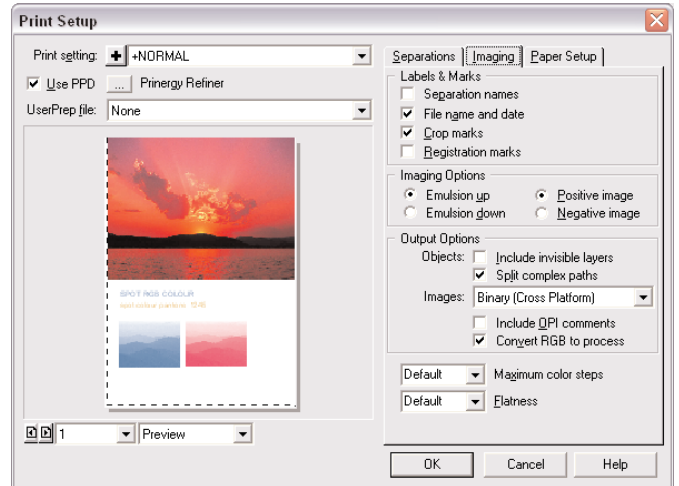

COLOUR MANAGEMENT Ensure that colour management is disabled. Adjust Display Colours is ok, as it will only calibrate the monitor view, not the final output colours.

SEPARATIONS TAB Settings as below.

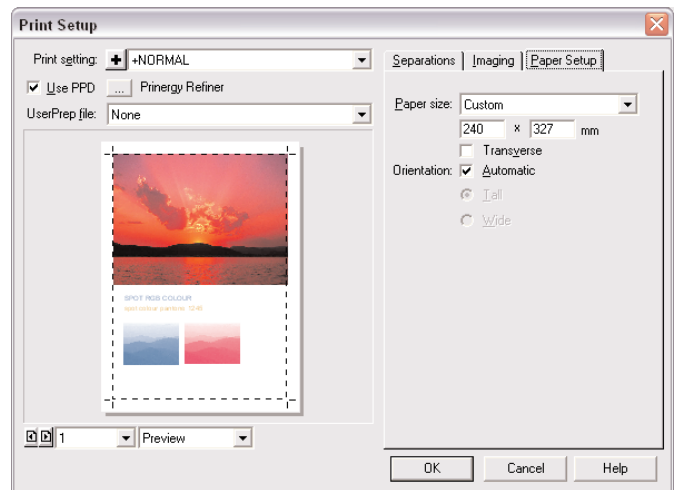

Check that the required colour separations are visible, and make sure that no unused or additional spot colours are present.

IMAGING TAB Settings as below.

PAPER SETUP Choose Custom paper size and set size to 30mm wider and deeper than document (ie add 15mm all around document to allow for bleed and trims). Click OK.

Click Ok, then Print in the main print window, then specify where to save the postscript file.

Save the postscript file, then run through Acrobat Distiller using the Finsbury PDF Distiller settings.
