

# Postscript settings for Freehand 8, 9, 10 (Mac)

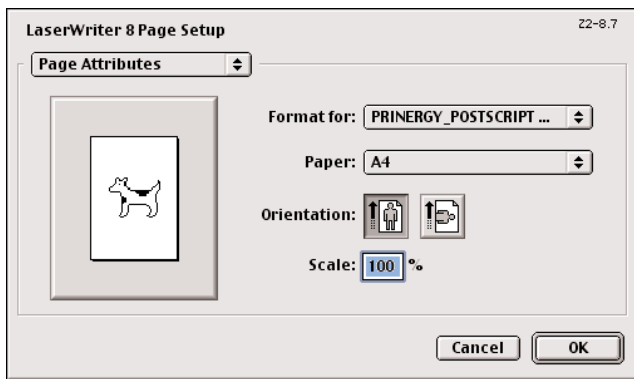

**CHOOSE:** Select AdobePS if available. Otherwise LaserWriter 8 is acceptable.

**NOTE:** It is not necessary to select a postscript printer if one is not available.

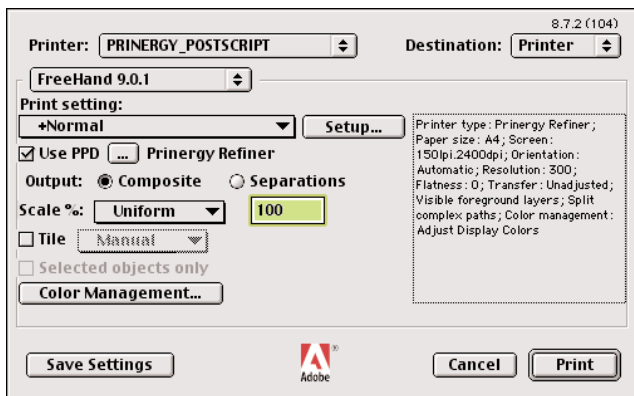

**PAGE SETUP:** Orientation must always be set to portrait, regardless of the orientation of your document. Otherwise, the resulting PDF may be rotated or cropped.

**NOTE:** It is not necessary to set the paper size here. Your printer may show up as "Virtual Printer" or something else, not PRINERGY POSTSCRIPT as shown here. This is irrelevant, as you will be printing to a file, not to a printer.

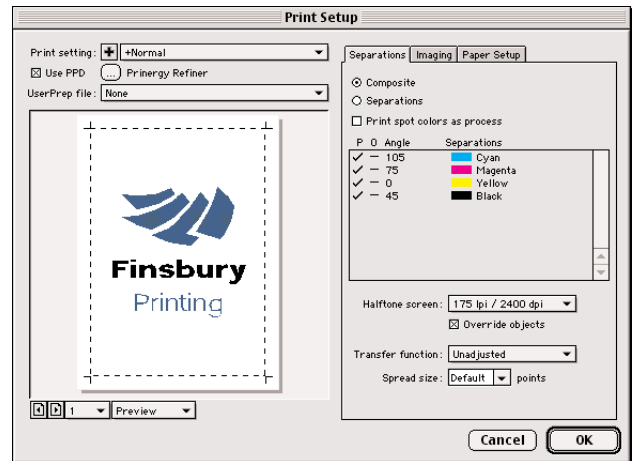

## PRINT / FreeHand:

Use the Prinergy Refiner PPD (or other high-res PPD). Set output to Composite.

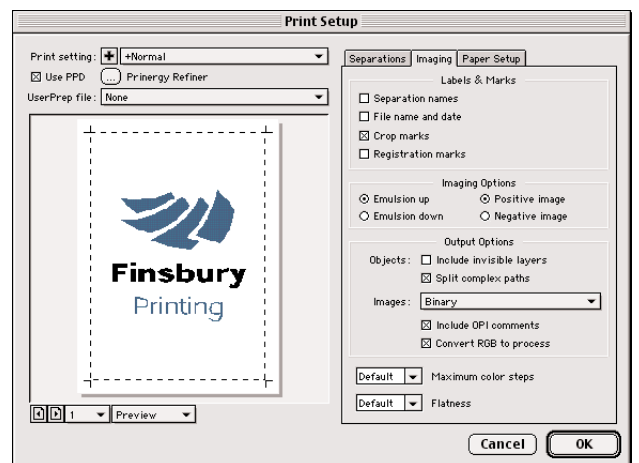

## PRINT / FreeHand / Separations:

Settings as below.

## PRINT / FreeHand / Imaging:

Ensure crop marks are selected, other settings as below.

## PRINT / FreeHand / Page Setup:

Set paper size to document size + 30mm (example shown is for an A4 portrait document).
