

Postscript settings for Freehand 8, 9, 10 (PC)

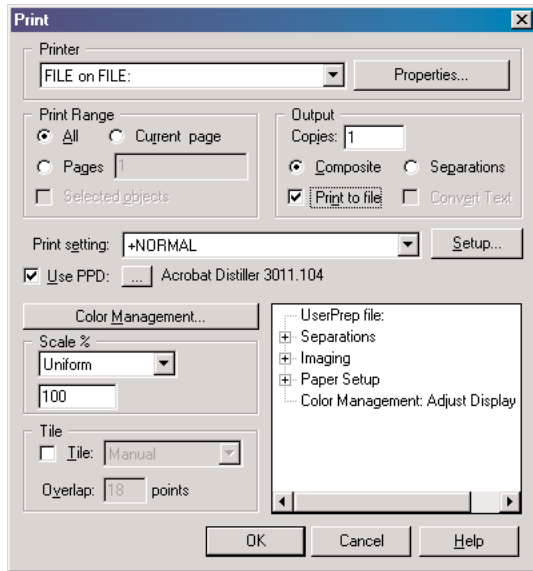

PRINT

Select **File / Print** and use settings as shown below.

NOTE: The current default printer is irrelevant as the document will be “printed to file”.

Either use the **Acrobat Distiller** or **Prinergy Refiner PDD**.

Then click on the **Setup** button to proceed to step 2.

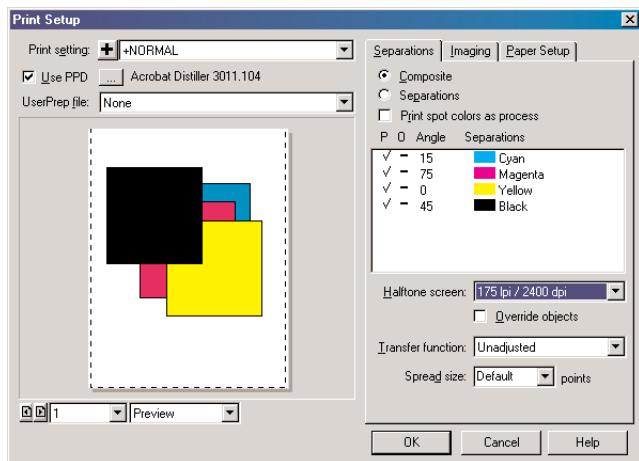

SETUP TAB

Use options shown below.

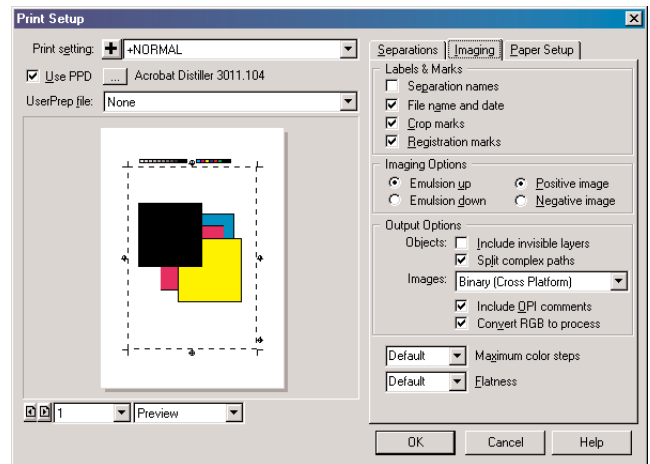

NOTE: the “Halftone screen” shown is 175lpi / 2400dpi.

If your currently selected PPD does not have this, use any setting available as long as it is over 2400dpi.

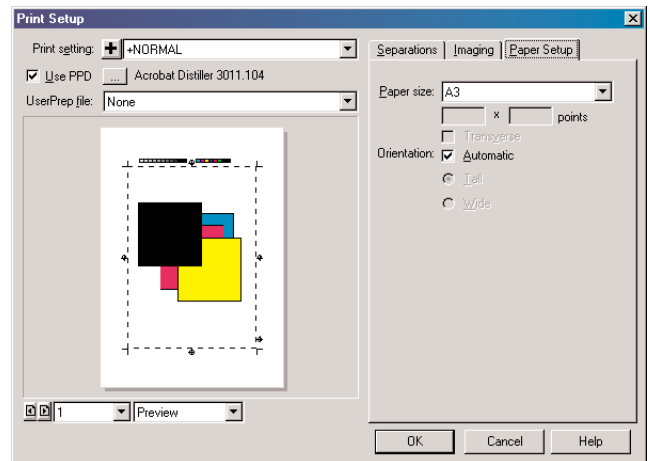

IMAGING TAB

Use options shown below.

PAPER SETUP TAB

Use options shown below, but ensure that paper size is larger than document size to allow room for printers marks and bleed.

Click **OK** twice, then select a suitable filename and destination for the postscript file.

Distill the postscript to PDF as described on the **Acrobat Distiller settings page**.
